Johnson I had checked this book out from my local public library - the patterns / projects were so good, I wanted a copy to by to use. I especially like the pattern for the gazebo; I'll build this later this year. 5 of 5 people found the following review helpful. Several nice projects By Laura Projects look dooable and instructions well written - just wish I could find some green wood 0 of 1 people found the following review helpful. best product By Evangeline Christian This product is sleek, light, and extremely sharp! For what I paid, I thought this was going to be a Walt-Mart knock off quality bread product, but this

thing has sliced through every bread I've thrown at it like butter! The handle is also really well designed and easy to get a good grip on, so getting nice, even, straight slices is really easy. I received it very fast. Very well. My husband thinks it is amazing, very good seller.

Green wood from a newly felled tree is easy to cut, bend, and shape. That is why working with green wood remains a time-honored rural craft for producing rustic-style furniture and other outdoor fixtures. Though there are many carpentry books on the market, few among them focus on this increasingly popular subject. Alan and Gill Bridgewater's brand new title is precisely what green wood carpenters have been looking for. Following a comprehensive introductory section on tools, techniques, and types of wood, the authors present 15 easy-to-follow projects that will result in attractive and useful objects made of green wood. They include a trellis, a garden bench, a rustic slab wood gate, and a backyard pergola, to cite just a few. Directions for all projects are heavily illustrated, and range from "easy" to "ambitious." Many can be completed within a single weekend. Large full-color photos of all finished pieces show do-it-yourselfers what their projects will look like when completed. There are 110 full-color photos in total, plus 60 instructive illustrations.

From Library Journal Most modern woodworkers shun green wood, preferring seasoned, milled lumber. But this was not always the case; many traditional crafters used freshly cut wood. The prolific Bridgewaters here offer a collection of 15 projects using such wood. These projects vary in complexity, with a birdhouse, trellis, or planter at one end of the spectrum and a chair, bridge, or gazebo-like structure at the other. The rustic woodwork shown here requires only the simplest tools and joinery, which are covered nicely in a short introductory section. The projects are attractive, with well-written instructions, and in many cases design variations are provided to personalize the projects. This title should be part of comprehensive woodworking collections. Copyright 2002 Reed Business Information, Inc.
