Nicols Castilla : Greenhouse Technology and Management before purchasing it in order to gage whether or not it would be worth my time, and all praised Greenhouse Technology and Management:

Greenhouse cultivation has expanded in recent decades with increased demand for food production and newly developed technologies to improve processes. This book, which concentrates on plant production grown in plastic greenhouse conditions, covers growing techniques such as fertilization and plant protection and up-to-date technologies and management practices. It also takes an integrated approach to greenhouse production addressing

issues such as economics, marketing and production strategies. This is the English edition of the successful Spanish book published by Ediciones Mundi-Prensa, Madrid, and delivers content relevant to Spanish and worldwide production.

About the Author Nicols Castilla is at the Agricultural Research and Training Institute, Andaluca, Spain.
