Neil Crouch, Gideon Smith : Guide to Succulents of Southern Africa before purchasing it in order to gage whether or not it would be worth my time, and all praised Guide to Succulents of Southern Africa:

4 of 4 people found the following review helpful. For those that have most succulent booksBy daniel variseThis book has some plants that are not in most older books and make It worth the cost to have even though It does not coast a lot. I would recomend this book to others and has a great price for It like other succulent books1 of 1 people found the following review helpful. The book is good but the layout of the ebook causes the picture ...By HanlieThe book is good but the layout of the ebook causes the picture and the text to be on different pages0 of 0 people found the

following review helpful. Four StarsBy CHRISTOPHER L. LYMANNice and informative book!

Twenty-five per cent of southern African flora is succulent in nature, and a remarkable forty per cent of the world's succulent plants occur in South Africa. The book will highlight the diversity of succulents that occur in the region with special emphasis on the larger groups mesems (vygies) and aloes. The book covers approximately 250 individual species, focusing on the most common and most interesting, and each entry features a photograph and distribution map.

About the AuthorGIDEON SMITH is Chief Director: Biosystematics Research and Biodiversity Collections at the SA National Biodiversity Institute. He is involved in various national and international environmental associations and advisory committees. His interests are in the biology and classification of succulent plants, as well as landscaping and horticulture. South Africa's most prolific author on succulent plants, he has authored or co-authored 40 books, and more than 500 research and popular papers, mostly on succulents.
